Supported decompactor

Strong points

The supported decompactor ARAPLOW ACV has been especially designed for settlements and soles destruction by cracking the ground.

The ARAPLOW ACV works by lifting the ground without changing its structure. The tine's shape creates vibrations which ensure homogeneous work over the entire width, even during wet conditions

It has numerous assets such as improvement of drain and plant rooting, keeping organic matter on the surface without bringing clods, low power consumption and versatility.
