

PHÉNIX TBX - TGX

Self-supporting X sprayer

PHÉNIX TBX

Self-supporting X sprayer

The discs sprayer Phénix TBX meets all challenges: the unique design of its double beam chassis and the direct control of the working angle break all limits of stubble cultivation.

The command centering inside the cabin allows the user to smoothly adapt the tool to all working conditions. The use of a roller is highly recommended for false sowing. It is made for tractors with power from 120 to 180 cv depending on the machine.

Strong points

Hydraulic adjustment of the angle of the discs

Longitudinal folding at 2,50 m on the road

Hitch fixed ring or rotating ring

Hydraulic connection : 2 DA outputs

Wheels lifting by 1 DA cylinder

⊕ DEPTH CONTROL

Using wheels with a DA cylinder equipped with a position hydraulic cue, which is an essential safety tool for work and on the road.

⊕ PIVOTING

High thickness with inside retaining, rings and lubricators for an optimal contact and movement.

⊕ CHASSIS

Double steel beam 200 x 120 x 10 mm for good rigidity at work and an even weight distribution. Easy access and maintenance. The spire is reinforced and integrates hydraulic hoses.

⊕ FAIRED BOXES + SHROUDS

With internal stiffeners and adjustable reinforcement shrouds for perfectly even ground on the entire working width.

⊕ BALANCE HYDRAULIC ADJUSTMENT

In option.

⊕ RAZOL «X» CONCEPT

Shifted front and rear discs with degressive assembly of the rear discs for perfect crossing and to avoid any chance of ridging.

⊕ SAFETY

Homologated 25 km/h as standard.

⊕ HYDRAULIC TBX H ANGLE ADJUSTMENT

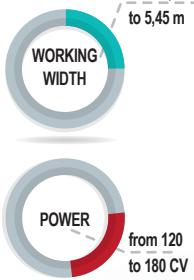

Synchronized of the 4 discs arrays by a single DA cylinder to perfectly suit the land, even during work. By increasing the angle value, a tensile stress is applied on the connecting rods and the inverter. The angle appears at the front to be visible from the tractor. The same cylinder is also used to set transport mode.

Standard lighting.

⊕ REAR ARRAYS ADJUSTMENT

By adjusting a screw bar for very accurate working angle adjustment depending to the type of the land.

Highly recommended for sloping, it keeps the tool straight and stable in difficult conditions.

+ BALANCE HYDRAULIC ADJUSTMENT

Useful for continuous adjustment while working on very rough ground.

ROLLER ROL 10

The PHÉNIX TBX can be equipped with a rear roller to crumble on the surface of the ground. The roller has hydraulic adjustment. However it also has a damping spring to deal with ground flatness defects.
